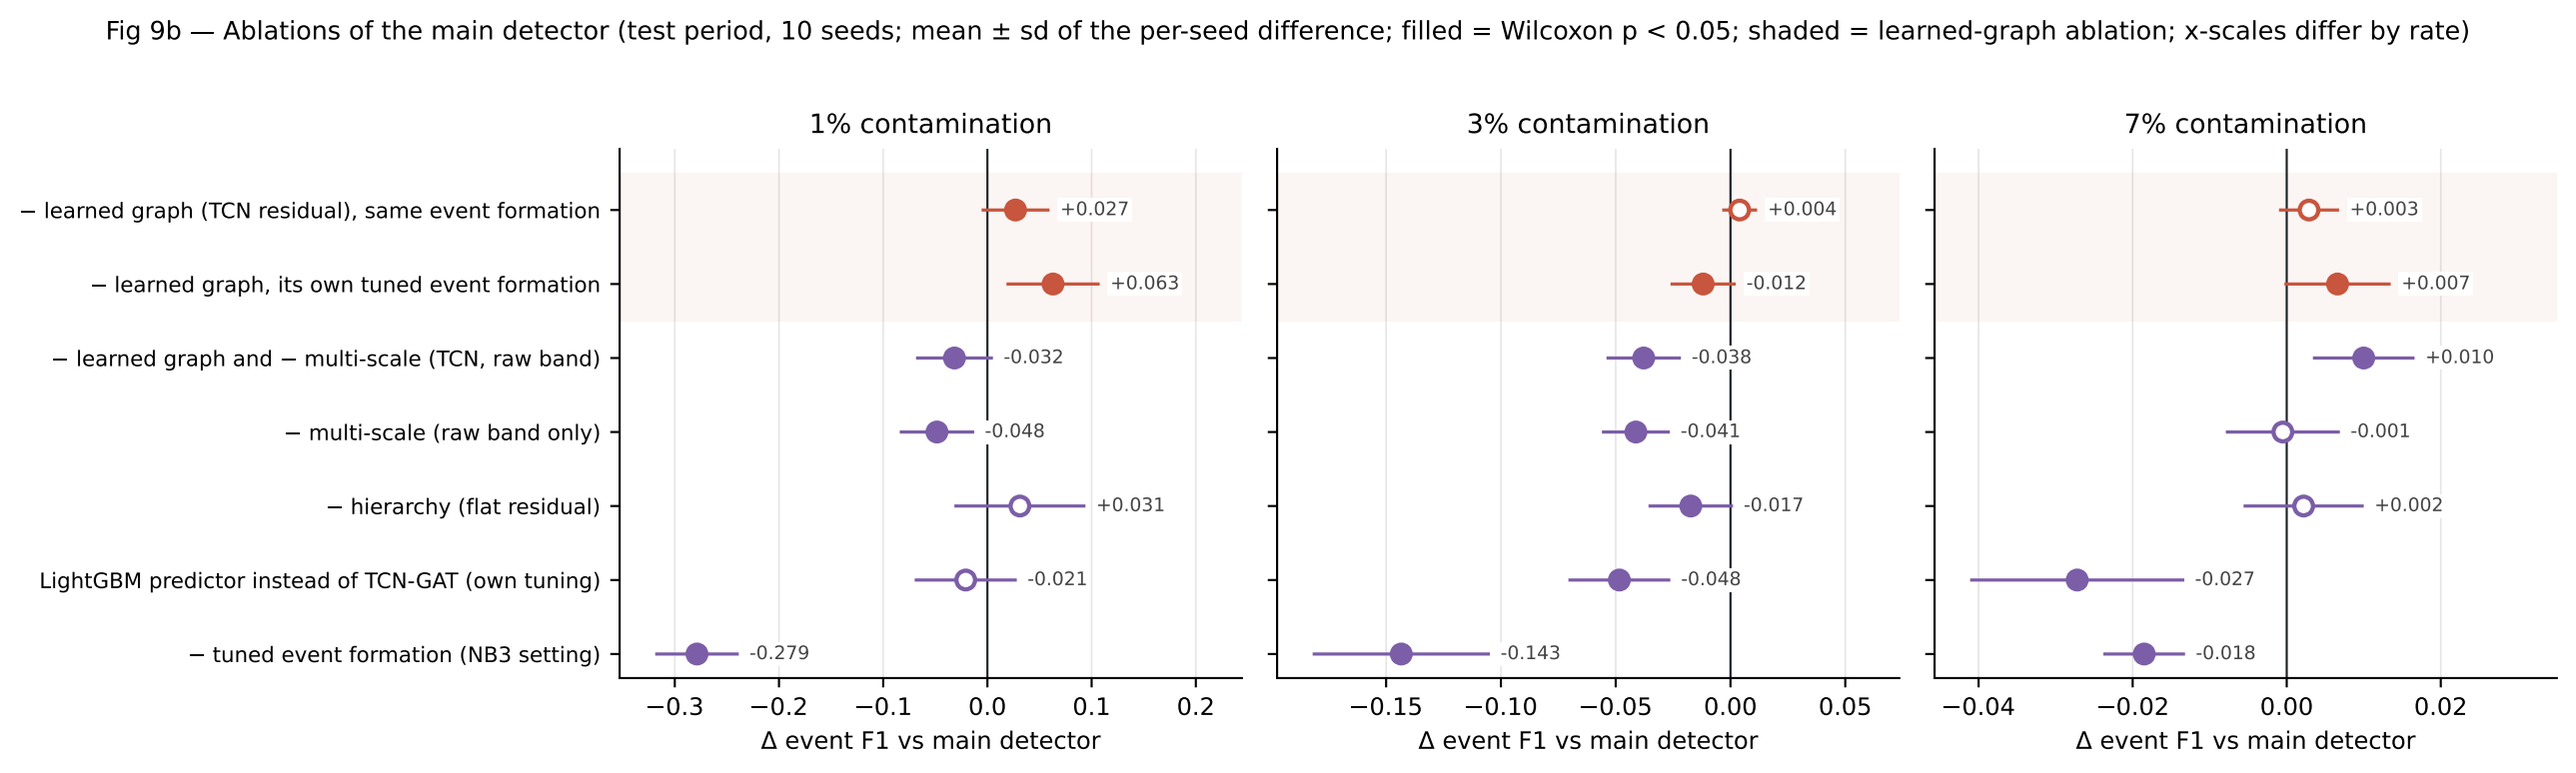

Fig 9b — Ablations of the main detector (test period, 10 seeds; mean ± sd of the per-seed difference; filled = Wilcoxon p < 0.05; shaded = learned-graph ablation; x-scales differ by rate)
1% contamination
3% contamination
7% contamination
− learned graph (TCN residual), same event formation
− learned graph, its own tuned event formation
− learned graph and − multi-scale (TCN, raw band)
− multi-scale (raw band only)
− hierarchy (flat residual)
LightGBM predictor instead of TCN-GAT (own tuning)
− tuned event formation (NB3 setting)
